

XM radio is the best thing since sliced bread, so please don't interfere with the way they present their program. When you can set your dial on a frequency and receive the same signal no matter where you are in the country. Giving you wonderful programming and the latest weather and traffic info in the major cities around the country. So in my interests, don't mess with a good thing. I pay for this service and expect to receive it as I do groceries when I go to the grocery store. Public radio is the venue of the public, Satellite radio is the venue of the subscriber.

Thanx,

Ray Thomas
